

Zagreb, 22 December 2010

INA – INDUSTRIJA NAFTE, d.d. – Response to the Zagreb Stock Exchange request

At the beginning of December test production on central gas station Jihar on Hayan block (Syria) has started. By putting the Gas station into production, LPG production is enabled as well, while the production capacities of gas and liquids are increased. After the finalisation of test production in first quarter of 2011 INA will be able to confirm the final level of hydrocarbon production, however, it is expected that it will be significantly increased in comparison with previous period, as it was announced as well in financial report for first nine months of 2010. The same statement is underlined as well in the statement of Mr. Zoltan Aldott, president of the Management Board of INA, which is part of mentioned report. Production capacities will be gradually increased and maximal production in Syria is expected in 2012.
